

TITAN: Just tighter skin

THE LUNCH TIME NON-SURGICAL FACELIFT

Are you bothered by loose skin on your face? Is your life so busy you can't afford to take time off? Are you hesitant to undergo surgery? Do you wish to tighten your skin? Then Titan is your answer...

WHAT IS TITAN?

The Titan™ is the most advanced technology available today to tighten the skin on the face and neck. Titan utilizes infrared light to safely heat the water and tissue in the mid to deep dermis causing collagen contraction. The Titan is able to cause almost immediate tightening of the skin in a way that was not possible until now.

HOW DOES IT WORK?

As we age we lose the support of collagen fibers in the skin. The loss of this collagen causes the skin to become loose, hang and droop. Titan has the ability to safely reverse this process to give you tighter skin. The infrared light energy generated by the Titan evenly heats the lower dermis causing the collagen fibers to contract. This process also activates new collagen and helps restore the skin's collagen cushion over the next 4-6 weeks, creating natural lifting and tightening.

WHAT AREAS RESPOND BEST?

The areas known to respond best to Titan are areas where there is loose, flaccid skin over the face and neck.

WHO IS A CANDIDATE?

The treatment can be done on all skin types and colors. If you've noticed lax skin over the years or have lost weight, Titan can help to reverse the damage, improve your skin condition and refresh your appearance. You may need a combination of procedures for optimal results. Since the Titan procedure does not require any anesthetic or medication, clients of all ages and conditions are good candidates for this treatment.

WHAT IS THE DIFFERENCE?

The Titan is the most advanced technology available today to tighten the skin. Unlike the other methods available, it is the safest, most comfortable, most consistent and affordable. With no pain and no downtime. It can be done on all skin types and conditions. The results are natural and permanent.

Radio frequency (RF) technology, like Thermage™ has not been perfected and the results are typically inconsistent and unpredictable. The RF procedure is often very painful requiring anesthetic and the treatment may unevenly damage the adipose layer of the skin leaving skin irregularities that may need to be corrected by other methods. Surgery has many risks and leaves permanent scars that may not be cosmetically desirable. Facelifts are often costly and may require further surgeries in the future to maintain or improve your desired appearance.

NO DOWN TIME

Although rare some clients may experience a mild flushing and swelling of the treated area, which usually resolves within a couple of hours. There is no down time and you may resume your normal daily activities immediately.

THE DOWN SIDE

The Titan is a very safe treatment modality that can tighten the skin in the appropriate client in a more consistent manner. Some clients may need repeated treatments to achieve the desired results. Titan is not a replacement for surgery, but an alternative.

WHEN WILL I SEE RESULTS?

You may see some improvement immediately after the treatment. However, most of the skin tightening is seen gradually over three to six months after the treatments, as the new collagen forms.

HOW MANY TREATMENTS DO I NEED?

Although you might see tightening of the loose skin after just 1 treatment, most people need a series of 3 treatments to reach their goal.

HOW LONG DOES IT LAST?

The results are permanent. However, we continue to age due to our genetic makeup, lifestyle, environment and sun exposure.

LENGTH OF THE PROCEDURE

The Titan procedure averages about one hour.

IF YOU ARE LOOKING TO TIGHTEN YOUR SKIN SAFELY, EFFECTIVELY AND NON-SURGICALLY, CONSIDER THE TITAN TREATMENT.

THE ADVANTAGES OF TITAN OVER OTHER TREATMENT OPTIONS

	TITAN™	THERMAGE™	SURGERY
Pain	Little or no pain. No medication needed.	Very painful. May need pain medication or anesthesia.	Very painful. Need pain medication or anesthesia.
Down Time	None	At least 1 day	At least 10 days
Length of Procedure	1 hour on average	2 hours on average	At least 4 hours
Risk of Infection	Minimal	Yes, if blistering occurs or if I.V. sedation is used.	Yes. There is risk for infection as with any surgery.
Scars	None	None, but may cause blistering and skin irregularity.	Yes. Some scars may not be cosmetically acceptable.
Overall Results	Most consistent results with minimal risk	Inconsistent results with risk for skin irregularity	Unpredictable factors such as complications & anesthesia
Cost	Most affordable	Need to pay for treatment & anesthetic for pain control	Most expensive
Need for Anesthesia	No. No medication or numbing cream is needed.	Yes. Need medication or anesthesia.	Yes, needs anesthesia.
Look of the Skin	Tighter, natural, more resilient	It may be tighter, but may leave skin irregularity	Tighter, pulled, thinner

SUMMER SPECIAL

\$995 for one
\$2495 for a series of three
